ABOUT US

Score Information Technologies Ltd., is promoted by the INR 7.5 Billion, 18000 employees strong, Kankaria Group. SCORE was founded with the vision to address niche needs of the market for Identifying, Authenticating and Securing critical business information.

SCORE is focused to meet the Identification, Authentication & Security needs of its customers by providing solutions based on Smart Cards, RFID, Finger Prints, Iris Recognition, Custom Application Development, Hand Held Applications, Video Surveillance, Access Control & Embedded Systems Development.

SCORE is certified & complies to the regulatory requirements of SCOSTA (Smart Card Operating System) as laid down by National Informatics Centre, Government of India. The Smart Card OS is engineered for compliance to ISO 7816 standards.

SCORE employs over 300 system professionals with an objective to formulate the complete solution in-house to avoid any third party dependencies. The extensive capabilities let our customers focus on their core business without taking the pains of steep learning curves associated with technology development and deployment.

SCORE follows process oriented approach along with strict quality management systems at the work place and is ISO 9001:2000 certified.

Apart from numerous success stories, we are proud to have designed, developed and delivered the first SCOSTA based National Level Smart Card project for the Ministry Of Defense, Government of India, in service of the Indian Army, Navy & Air force which caters to more than 2.5 million beneficiaries spread over 230 locations.

SCORE is also associated with India's National ID project which runs on the Smart Card Operating System developed by SCORE.

SCORE manages over 600 customer location for technical and maintenance support through countrywide presence to meet the most stringent service level agreements.

IDENTIFY

SCORE's offering enables the Government to identify the citizen's accurately and enable it to transact business with the citizen's more efficiently and transparently.

SCORE is determined to provide its cutting edge smart card based solution for better governance which enables the Government to develop informed policies and work effectively in implementing framed policies.

SCORE's offering covers a wide range of domains which include Health, Insurance, Rural Employment, Transport & more.

SCORE also enables the corporate sector in addressing the challenges of identification of its manpower, assets, inventory and business processes.

HEALTH & INSURANCE

‘Score Health’ is a suite of web enabled and smart card based healthcare information management system that automates the front office, clinic, clinical support, inventory and back office operations in healthcare facilities. For the customer this means better cost control, increased efficiency, improved resource utilization and above all, better healthcare delivery to the patient.

SCORE Health can be configured to adapt to the workflow of any healthcare facility and the smart card interface combined with multi-location feature allows it to be implemented seamlessly across a chain of healthcare units.

Whether it be a multiple tier set up with a chain of distributed polyclinics or satellite centres as the basic level and a tertiary hospital or a central controlling unit as the other end of the healthcare delivery system, the smart card based system enables the patient with a secure health information storage system and lends flexibility to the patient to visit any of the healthcare delivery points. The biometrics based fingerprint identification provides a powerful and faster mechanism to reduce frauds due to misuse or impersonation.

SCORE's health solution has found recognition with the Indian Armed forces for their Ex-Servicemen Contributory Health Scheme of the Ministry Of Defence, Government of India - a multi application turnkey project which is India 's first & Largest Smart Card project on SCOSTA.

SCORE has provided turnkey solutions in the ‘Rastriya Swastha Bima Yojana’ (the National Health Insurance Scheme) roll out services from enrollment of beneficiaries, instant card issuance & transaction software for registered hospitals.

TRANSPORT

Driving License

The number of vehicles on the road and as such their drivers has increased exponentially during the last decade. To manage the issuance and tracking of driving license and penalties for traffic offences with such large number of drivers with a compounded growth year after year, an Integrated Solution with timely access to information, across all locations, is the need of the hour.

SCORE has the complete solution for the Transport Department which will help them in automating the issuance of license, fines, offence management, on road checking, data collection, MIS reporting, identifying repeat offenders & workflow.

Delhi Driving Licence & Andhra Pradesh Driving Licence and Vehicle Registration Certificate runs on SCORE's supplied smart cards.

Vehicle Registration

The solution is designed with the objective to computerize the District Transport Offices for facilitating entry and processing of data relevant for issuance of Registration Certificates. It integrates with the National Informatics Centre's backend software and smoothly integrates Issuance of Registration Certificates and Driving Licenses on Smart Cards while equipping the regulatory authorities with hand-held Smart Card Readers. SCORE enables the automation of vehicle record management, revenue, issuance of registration certificates and other departmental needs for better governance by the Transport Department.

FINANCIAL INCLUSION

National Rural Employment Guarantee Scheme

SCORE provides an integrated solution wherein the beneficiary is identified, authenticated and issued a Smart Card. The biometric identification of the beneficiary can be stored in the Smart Card. It helps in monitoring the identity and attendance of the beneficiary. Based on the attendance the beneficiary is paid the money from the banks or other financial institutions. This technology helps to identity and benefit the legitimate beneficiary.

Local employment generation in rural India - the National Rural Employment Guarantee Scheme in action

Micro finance

Microfinance is provided by Microfinance Institutions (MFIs) which offers broad range of financial products such as deposits, loans, payment services, money transfers, insurance etc. to low-income households and micro enterprises which are usually concentrated in rural or underdeveloped areas.

SCORE offers the desired Smart Card based flexible financial platform, centrally maintaining the backbone of the system and of the whole micro-finance operations within its operational scope and domain. It enables banks to offer to its Partners (MFI's) self-sufficient access and usage of the system. This in turn enables all the involved parties to access through a single platform, following the laid down rules and guidelines and also allowing the flexibility for member specific customization of certain products within the portfolio. In addition, the central maintenance and operation of the overall system platform and its respective databases also provides the respective Bank(s) with a “complete audit trail” and system integrity down to the lowest system/structure level.

PUBLIC DISTRIBUTION SYSTEM

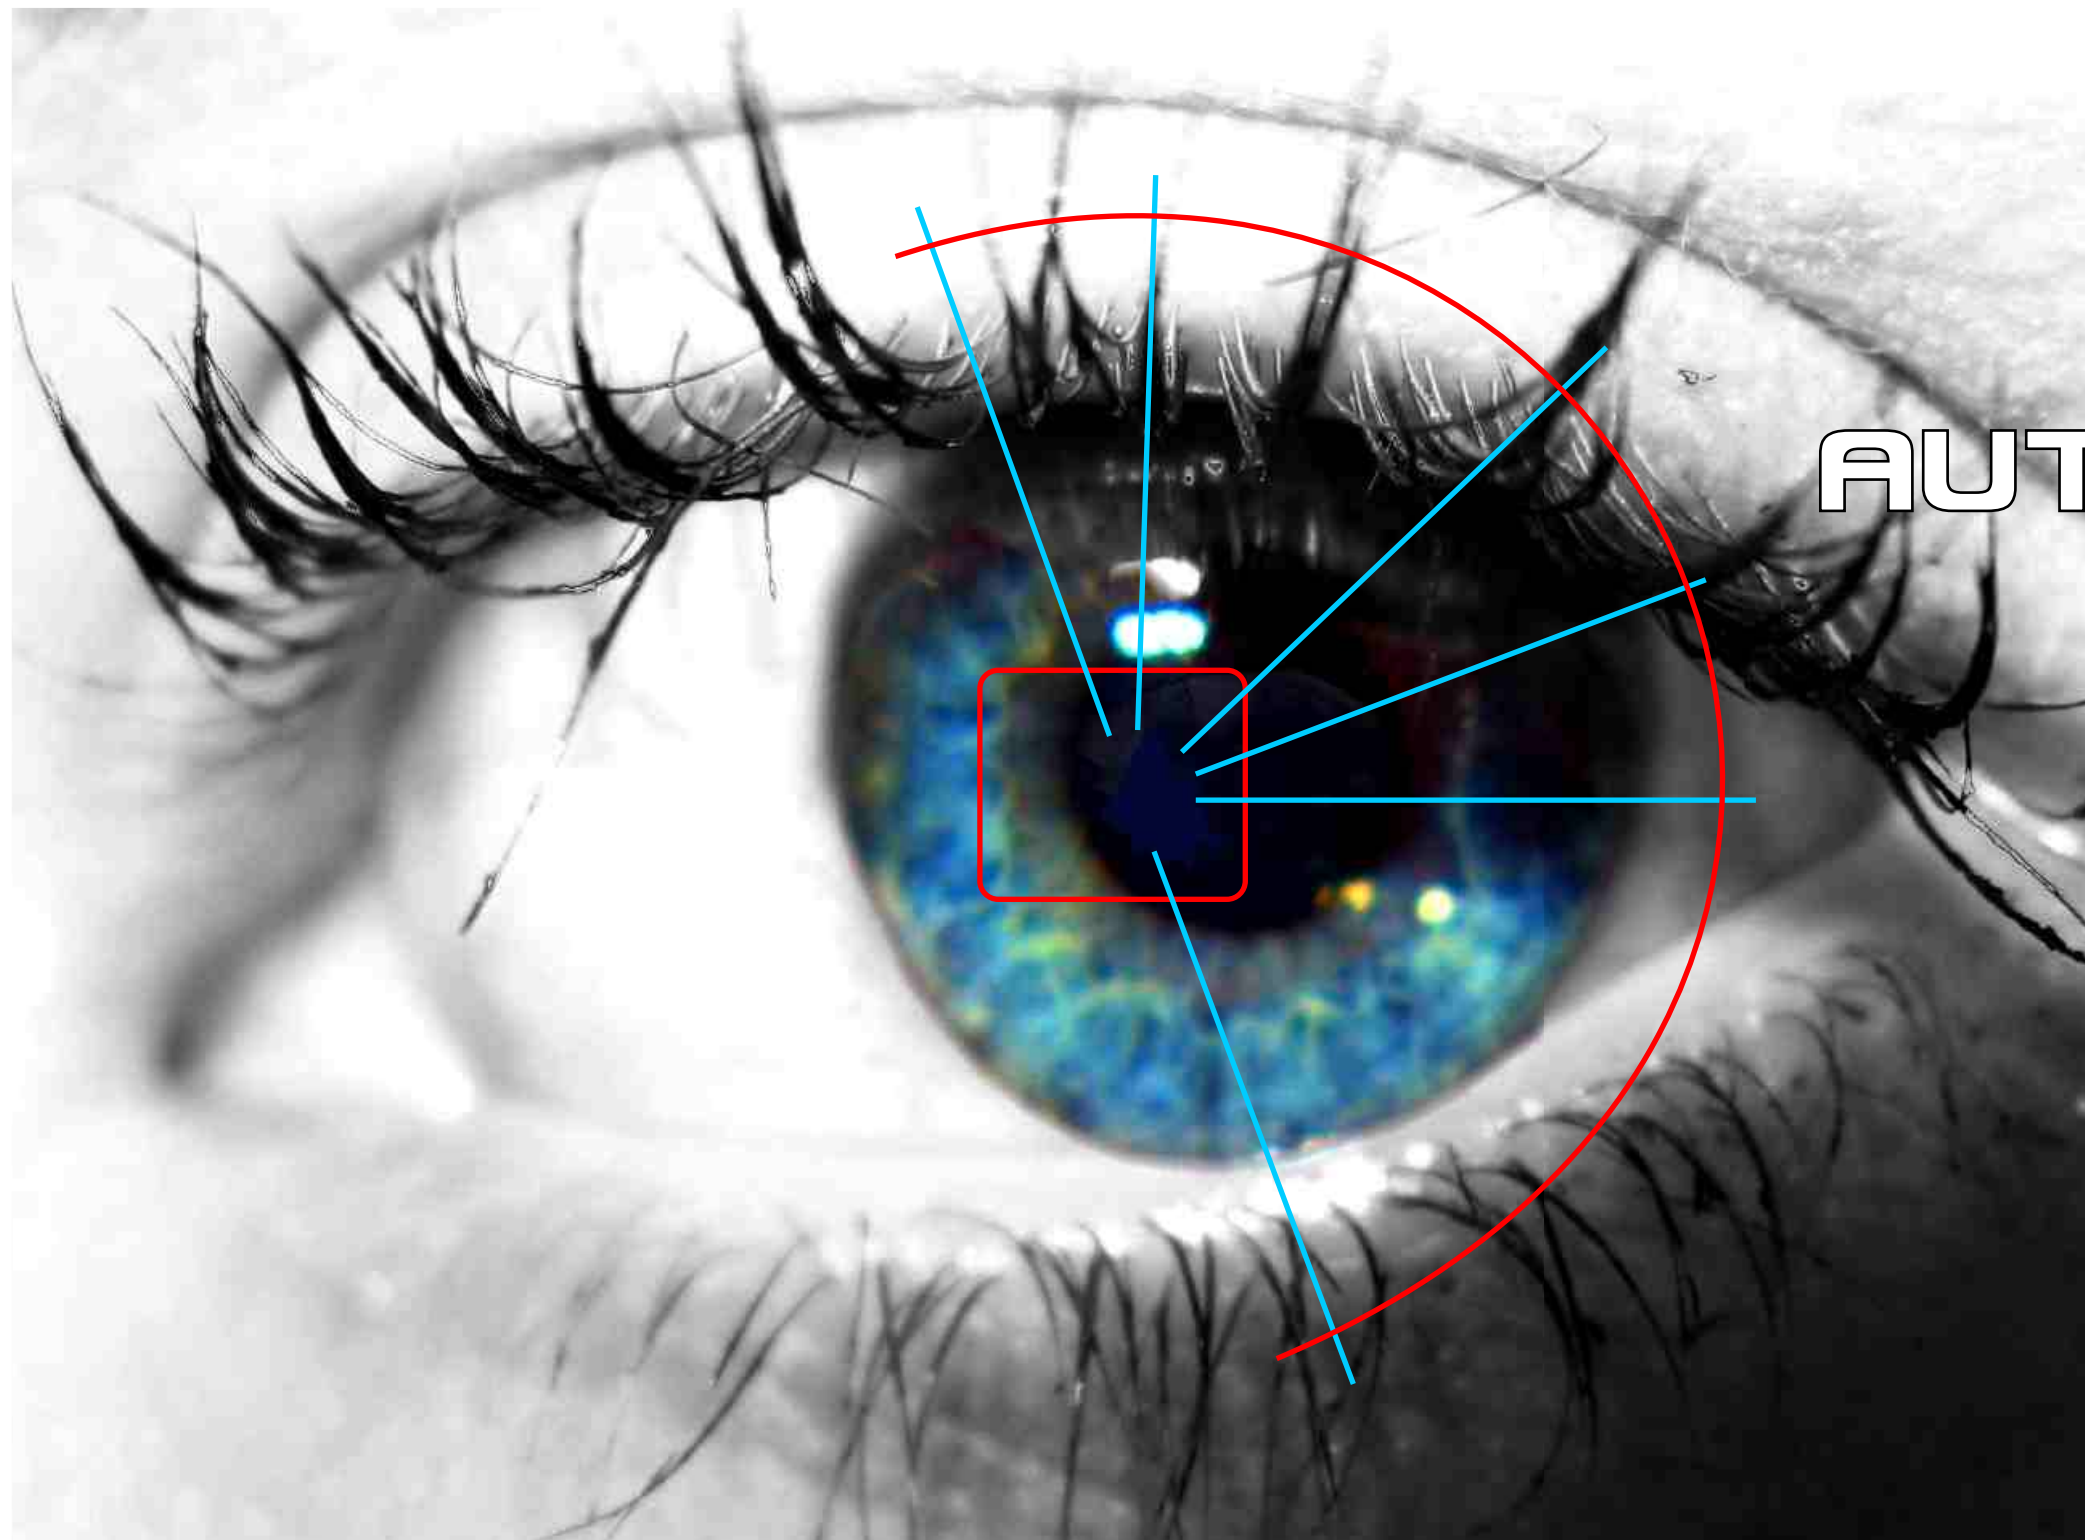

The Public Distribution System (PDS) is a poverty alleviation programme and contributes towards the social welfare of the people. PDS is primarily a social welfare and anti-poverty programme of Govt. of India. Revamped public distribution system (RPDS) has been initiated by the Government of India from the year 1992 in order to serve and provide essential commodities to the people living in remote, backward and hilly areas.

SCORE provides an integrated solution using which the consumers can be identified, authenticated through Smart Cards and then issued their quota of commodities. The biometric identification of the consumers can be stored in the Smart Card. The application offered can map the inventory of the commodity distributed till the last instance. This application helps in passing the benefits to the genuine beneficiary and curb organized scam.

Ration card holders at a Ration Shop

AUTHENTICATE

SCORE enables applications to be integrated with multiple authenticating technologies which helps cut down fraud in the system. The understanding and real time applications of authenticating technologies like PKI, Key Management Systems, Finger Prints & Iris recognition has won accolades from many customers across the country.

FINGER PRINT

Whatever be the application where the Finger Print technology is required, SCORE will assist in selecting the right product and integrating with the desired solution.

SCORE has implemented over 200 projects involving use of finger print technology from as varied needs of dispensing health care benefits, access control, attendance systems to secure log on. The strategic business understandings with our principals enable us to remain updated and be precise in our offerings.

Our range of offerings starts from 1:1 matching, 1:n matching and template on card solutions.

IRIS

Iris recognition is an attractive technology for identity authentication for several reasons apart from the fact that Iris pattern and structure exhibit long term stability and has come across robust for handling large databases. This technology provides high level authentication and is used for controlling identity theft, a fast emerging problem globally.

SCORE provides end to end solution for applications requiring IRIS Authentication. SCORE has delivered various projects using Iris Recognition in the country. Amongst the open environment applications for using Iris as an established technology the project executed for Vishakapatnam Steel Plant for contractor and employee access and management is a standing testimony of SCORE's capabilities in delivering customized applications.

RFID SOLUTIONS

With expertise and alliances across the RFID system value-chain (RFID hardware, edge servers, middleware and application software), SCORE helps organizations plan and implement RFID enabled systems across multiple business areas.

SCORE has a dedicated centre for development of RFID based applications. The solution offerings are engineered to meet unique requirements depending upon the need and application of the RFID tags in the field. The experience in real time projects includes jewellery tracking, quality assurance and manpower tracking in large industrial plants apart from warehouse management, finished product tracking in the supply chain and securing important documents.

SCORE offers a wide range of hand held terminals, tags and readers complying to international standards. The offerings include turnkey solution provisioning from

consulting, system design, customized application development, identifying the right type of tag, the right type of readers, system integration, training and handover of a stable system.

SCORE is geared up to provide specialized solutions on all frequencies with read range starting from few centimeters to over 5 metres in the open environment.

The strong understanding of the supply chain and long term relationship with world major's in the RFID component and product manufacturers has enabled SCORE to provide customized tags and hand held readers as required.

The RFID Practice at SCORE can help you analyse your requirements, study your business processes, identify the need of RFID, identify the right tags and readers, prepare ROI, design the solution, develop the customized application, deploy and train the end users.

SECURE

We live in a world faced with everyday risk of crime be it physical theft, identity theft, risk of life or property. SCORE strives to make life more relaxed by securing the business infrastructure be it information technology based or physical assets by providing turnkey solutions in the field of high end Video Surveillance and Access Control using multiple combinations of technologies as required to meet the most stringent security objectives of the customers.

VIDEO SURVEILLANCE

SCORE offers end to end solution for Video Surveillance based on analog-digital hybrid and IP enabled systems. From consulting, system architecture, design, deployment and maintainance the entire gamut of services can be availed as desired.

SCORE has strong relationship with world rated original equipment manufacturers in the field of Closed Circuit Cameras, Display Systems, Video Analytics and related components. SCORE's solution has found favour and use by various security agencies for sensitive area operations.

Be it an open market environment, a compounded wall complex, a mall, a township or public safety need, SCORE has delivered projects and won repeat customers. Some of the projects have been delivered in extreme geographical and environmentally challenging locations.

SCORE enables to achieve the integrated security management system needs even for the most discerning customer.

ACCESS CONTROL

What ever be your need in access control using contactless card, contact card, finger print, iris recognition or radio frequency based access, SCORE can demonstrate real time field applications.

SCORE will design, develop and customize the integrated application using all possible and required biometrics technologies to achieve the end objective. The offerings are custom made and also sold as product solution in the market.

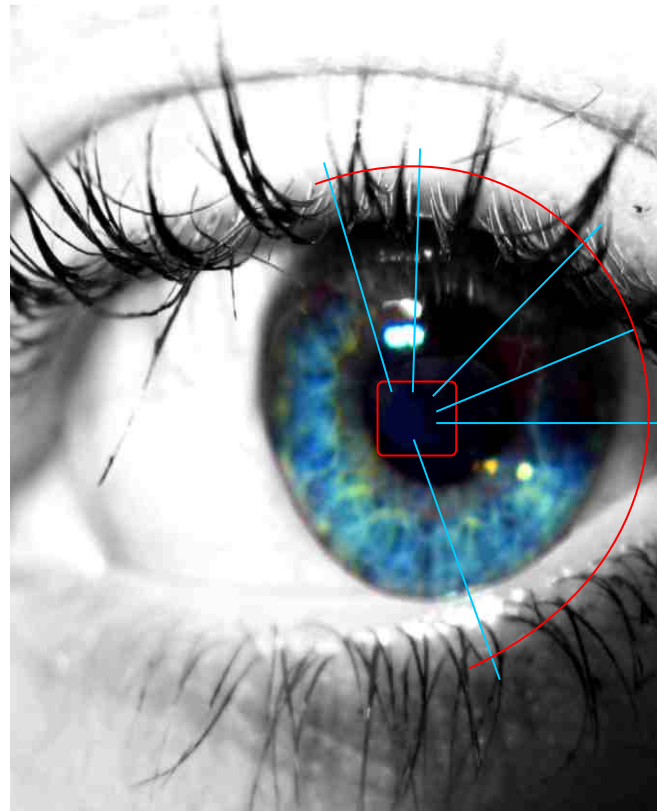

Vishakapatnam Steel Plant chose to deploy UHF RFID & Iris recognition system for its steel plant employing over 10,000 people. It trusted SCORE as its vendor of choice like many other Government & Corporate customers.

SCORE's 'Access Enterprise' is an enterprise wide customizable, scalable and highly secure time attendance & access control solution which effectively addresses the challenges faced by Management, Supervisors, Employees and HR. The solution deploys various technologies such as Proximity Cards, Contact and Contactless Cards, Fingerprint & Iris Recognition and can be easily integrated with Boom Barriers, Full & Half Height Turnstile Gates, CCTV and Electromagnetic Locks & Road Blocker to address access control & security concerns. Its unique ability to provide multiple applications like physical access control, personnel administration, canteen management and visitor management ensures that customers get value for money on their investments.

DELIVERING SOLUTIONS

SCORE provides turnkey solution as an one stop shop for all solutions that needs to have the elements of Identification, Authentication & Security. At SCORE it is understood and well appreciated that each customer needs an unique solution for its problems and that one size shoe does not fit everyone.

Solutions architected by SCORE can be as simple as logical access control on user login using passwords in the custom made application, to integrating various new age technologies at different layers in the solution which includes Key Management System, PKI, RFiD, Smart Cards, Finger Prints, Iris Recognition or field level data acquisition devices.

APPLICATION DEVELOPMENT

SCORE will help you see through the end to achieve what you strategise especially when off the shelf and ready made software can not help you address your business needs. We always bear your business objectives and strategies in mind while we implement our services.

The SCORE philosophy is ingrained with pre-defined methodologies and a process oriented structured approach with a strong focus on quality. We can do the entire life cycle management from Application Development to Implementation and provide round the clock support on a budget.

You may choose SCORE for one or all of the aspects of Application Development Outsourcing.

You may also have integration of Smart cards, IRIS, finger print and RFID technology as required to your existing application.

SCORE's alliance with world leaders in technology and

experience in handling multi location deployment of applications developed in-house has earned accolades from its customers which not only includes large industrial business groups involved in manufacturing, business houses active in trade and services but also the Government.

Amongst notable projects executed for the Indian Defense are Automation of Director General Of Dental Services & Ex-servicemen Contributory Health Scheme.

SCORE's ERP Product 'Effect' has found recognition in Textiles Manufacturing, Apparel Manufacturing, Engineering, Finance, Consumer Goods Manufacturing & Retail Companies.

SMART CARD OS DEVELOPMENT

SCORE has expertise in smart card OS development for application in GSM & ID business. SCORE is the 1st company in the world to get SCOSTA certification from National Informatics Centre, Govt. of India.

The in-house team ensures on time readiness in offerings of the Card OS as per up to date specifications and portability over multiple platforms and new family of chipsets. SCORE collaborates with the leading semiconductor companies in the world for its Smart card OS development.

SCORE has worked extensively on the Smart Card OS development with world leading semiconductor companies like Infineon, NXP & Samsung.

SCORE has facilities and processes in place for doing third party Smart Card OS Development and has also licenced its Card OS to various companies.

CUSTOMERS' PARTIAL LIST

All trademarks acknowledged

SCORE has consistently endeavoured and delivered customer delight through its services and solutions over the years.

We score ourselves as the preferred company of choice for our customers.

We always look forward to bring value in our offerings and deliverables in the realm of Identification, Authentication & Security.
